

A Display Panel Structure

Abstract

5

A display panel structure, which includes plasma display panel and filter, wherein the plasma display panel further has front glass and rear glass. Through this front glass, the plasma display panel displays images to the outside. The rear glass is corresponding to the front glass and is
10 inter-spaced with the front glass. There is plasma enclosed between the rear glass and the front glass. The filter is directly formed upon the front glass, so the filter may be enforced and supported by the front glass and the original glass layer within the filter may be removed.
